# Virtual PPA Settlement

OffTaker C • 6 virtual PPAs

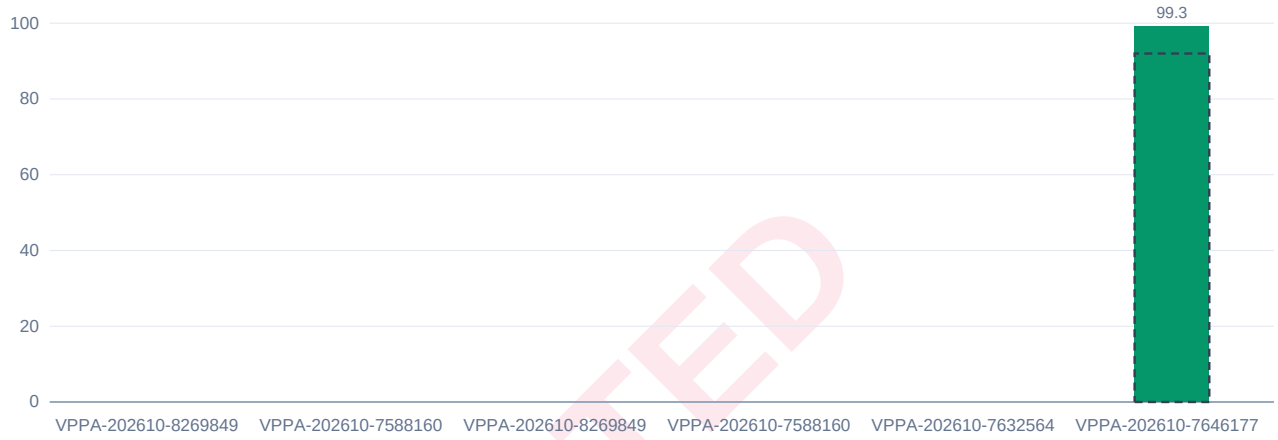
**Sep 2026**

Prepared for OffTaker C

**Your 6 virtual PPAs settled 25.7 MWh in Sep 2026. On the market-indexed periods, the reference averaged 99.3 c/kWh against a strike of 92.0 c/kWh, so the generator pays the buyer. You pay R 12,223.12. Since the start, net settlement is R 12,989 against you.**

| SETTLED VOLUME | REFERENCE AGAINST S | YOU PAY | SINCE THE START | HEDGE EFFECTIVENESS |
|---|---|---|---|---|
| 25.7 MWh | 99.3 / 92.0 c/kWh | R 12,223 | R 12,989 | No data |
| | Reference above strike | R 12,223.12 | Net against you | Needs 6 months of settlem |

### The reference ran above the strike, so the generator paid.



### Net settlement since the contract started.

### EXCEPTIONS AND NEXT STEPS

Nothing needs your attention for this period.

### NOTES AND METHOD

Hedge effectiveness (VPPA). How much the VPPA reduced the variability of energy cost: 1 - (std. dev. of hedged monthly cost ÷std. dev. of unhedged monthly cost).

Grades present: Estimated (hedge effectiveness).

Method: Eskom credit-rate VPPAs carry no market index: the buyer pays the strike and keeps the Eskom credit, so they count in the amount but not in reference against strike. For market-indexed VPPAs, strike and reference come from each settlement period's index snapshot, by time-of-use bucket, weighted by the period's settled volume. The amount is your own energy lines on the VPPA's settlement periods. Hedge effectiveness compares the spread of your monthly cost with and without the settlement, and needs six months.
