Risk Limits and Exposure

Trader 1 • 5 books

Sep 2026

Prepared for Trader 1

All 5 limits were respected on the one day with a risk snapshot. Utilisation is highest for coverage (76%).

LIMITS BREACHED	HIGHEST UTILISATION	VAR 95% (1-DAY)	EXPECTED SHORTFALL	APPROVALS GRANTED
0	76%	No data	No data	0
	Coverage	No risk distribution	No risk distribution	

Coverage is the tightest limit.

Margin at risk is within its limit.

Nothing needs your attention for this period.

NOTES AND METHOD

Grades present: Estimated (VaR and expected shortfall).

Method: Each active limit is read against its book's risk snapshots: the metric's value (for a pool- or counterparty-scoped limit, that pool's or counterparty's value), the level in the limit's direction, the peak and the days in warn and in breach. Utilisation is the value over the breach value (the breach value over the value for a limit breached from below). A breach is cleared on the next snapshot of its book that does not record it. VaR and expected shortfall come from the one-day risk distribution.
